

** Selectors

(i) Universal Selector.

→ Iski madad se document me jitne v chips hai un pe lagayi gyi property show hogi.

ex -

```
* {  
  Color: blue;  
}
```

(ii) Element Selector.

→ ~~is~~ jis v element ko select kr ke agr ham usme styling add krte hai use element selector kahte hai.

h1 will be apply on h1 tag only.

```
h1 {  
  Color: red;  
}
```

(iii) Id Selector

→ unique name

→ ham chah to kisi tag ko unique id ke sakte hai aur using this id ham style add kr sakte hai.

```
#myId {  
  Color: blue;  
}
```

(iv) Class Selector.

→ Multiple elements ko same property dena hai to ham multiple elements ko same class ka name de sakte hai.

```
• myClass {  
  color: red;
```

Q Practice Set-I

Q1 Create a simple div with an id "box".
Add some text content inside the div.
Set its background color to blue.

Q2 Create 3 headings with h1, h2 & h3.
Give them all a class "heading" & set color of "heading" to red.

Q3 Create a button & set its background color to:
• green using css stylesheet
• blue using <style> tag
• pink using inline style.
